DOCKER CONTAINER - FINE TUNING

LOGIN AS ROOT

Login to the VM using Google console

`docker ps` will produce the list of containers currently running on the machine.

`sudo docker exec -it --workdir /root --user root 6fd64c963bb1 /bin/bash` will allow to enter docker container as root.

UPDATING

`apt upgrade -y` will update/upgrade all packages

INSTALLING

`apt-get install mc` will install Midnight Commander

`apt-get install wget` will install wget

INSTALL PLUGINS

```
mkdir /home/downloads
cd /home/downloads
wget https://github.com/VolkovLabs/volkovlabs-echarts-panel/archive/refs/heads/main.zip
grafana-cli --repo https://volkovlabs.io/plugins plugins install volkovlabs-echarts-panel
```

This will require the entire docker container restart

`sudo docker restart 6fd64c963bb1`
