

# GRAFANA INSTALLATION

INSTALL DOCKER (LINK)

INSTALL NGINX (LINK)

You have to upload the certs and place into /etc/nginx

After install nginx, you have to edit nginx.conf, and reset nginx.

## GRAFANA INSTALL

```
docker run -d --name=grafana -p 3000:3000 grafana/grafana-oss:9.0.0-ubuntu
```

Now you can login in <https://analytics.scheduleinterpreter.com/login>, the first login is admin/admin, after login you have to set a new password.

Useful information (This information is related to taiga but there are commands that can be used in any docker container)
