BPM FOR DATA EXCHANGE

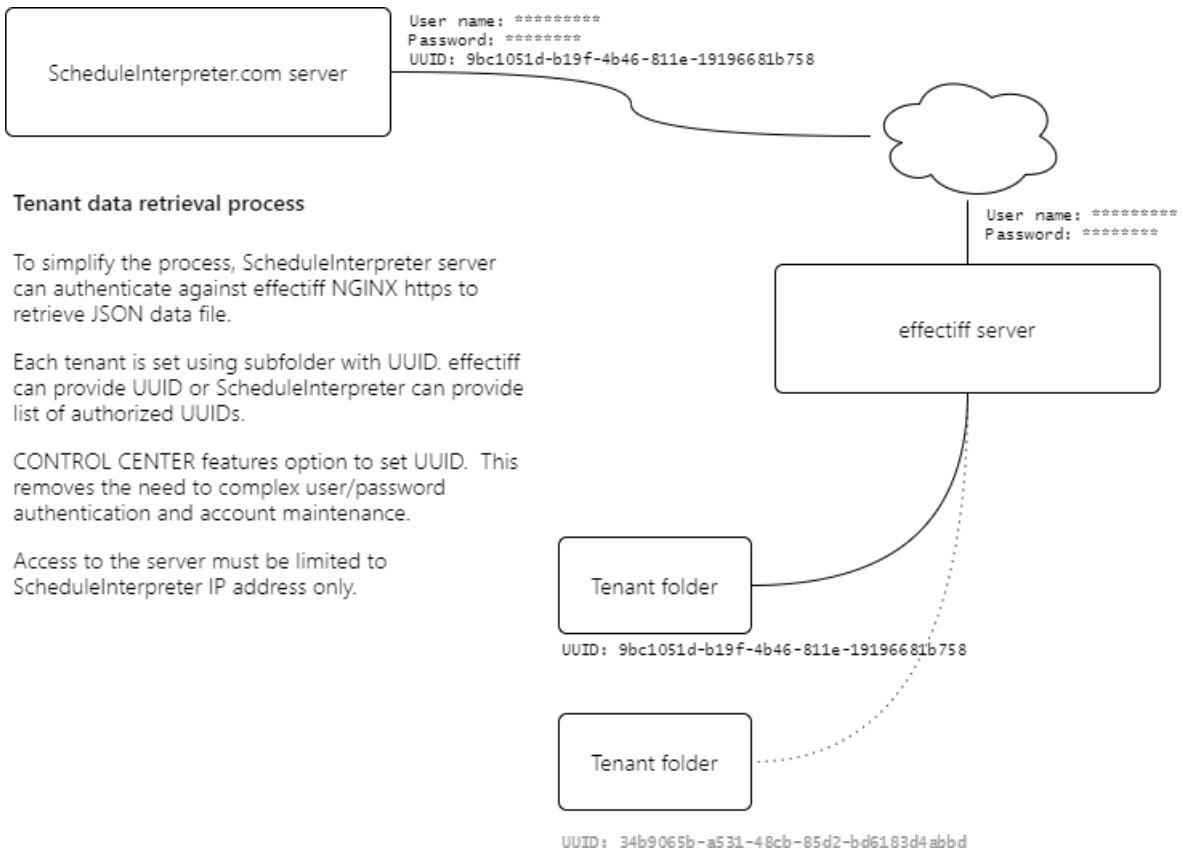

Authentication can be completed using direct URL

https://hub.effectiff.net/calls/script.php

https://hub.effectiff.net/calls/logs.json

user1/u$VL9P,b

```
curl -u 'user1/u$VL9P,b' https://hub.effectiff.net/calls/logs.json
```

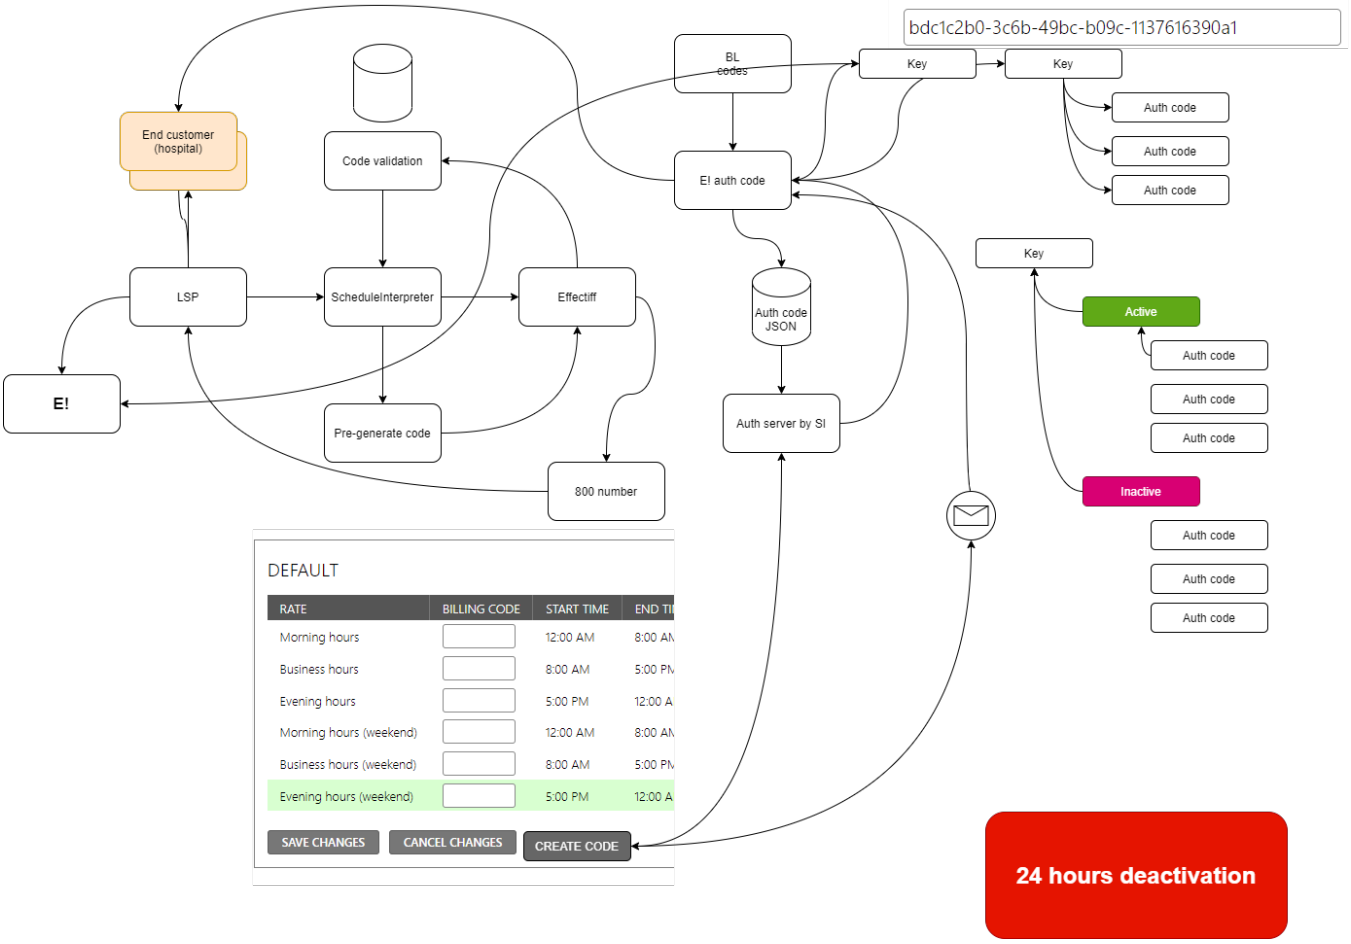

Tenant data retrieval process

To simplify the process, ScheduleInterpreter server can authenticate against effectiff NGINX https to retrieve JSON data file.

Each tenant is set using subfolder with UUID. effectiff can provide UUID or ScheduleInterpreter can provide list of authorized UUIDs.

CONTROL CENTER features option to set UUID. This removes the need to complex user/password authentication and account maintenance.

Access to the server must be limited to ScheduleInterpreter IP address only.

EFFECTIFF AS A VENDOR

In the `global_lists` table make a list with id 20. This list holds the configuration of 3rd party providers.

In the `global_lists_items` table make an entry for Effectiff using the following 3 parameters. The rest of the fields can be left as default.

Field	Content	Type
listId	20	int
name	effectiff	string

config_json	{
	"configuration": {
	"connection":{
	"email": "effectiffsinotificationsinbox@effectiff.com",
	"host":"173.0.156.178",
	"user":"sinterpreter",
	"password":"staSPE8e",
	"remoteDocument":"/home/sinterpreter/logs/{partner_key}/data.gz",
	"localDocument":"/home/si/import/{path}/data-effectiff.gz"
	}
	}
	}
		blob

Under TOOLS AND SETTINGS > VENDOR CENTER > Vendor of choice >GENERAL a new option is added to generate a custom partner key.

After key is generated, an e-mail notification is sent to the email address listed under connection key in the config_json field. The content of the e-mail provides instructions to the 3rd party provider on activating new

account.

Confirmation e-mail is sent to the user who generated the key. Key is added to the vendor profile under config_json store field.

```
{
    "configuration": {
        "connector": {
            "partnerKey": "a5f8d9a0-2e7a-4eee-9508-584af9f983b2",
            "editDateTime": "2021-09-20 12:15:14 PM",
            "editUID": null,
            "createUID": "1708",
            "createDateTime": "2021-06-16 08:38:14"
        }
    }
}
```
