BJC EPIC DATA DROP

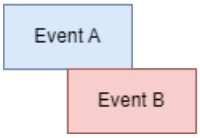

Possible scenario is to limit data drop to 24 hours prior to the event.

Each event must have a flag indicating if the drop took place.

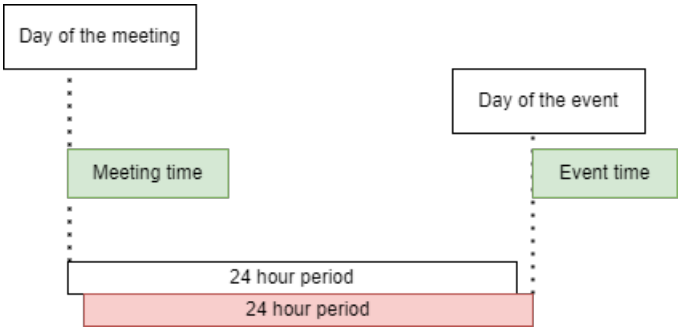

Only events that do not have the flag are transferred to EPIC. This will reduce the volume of every drop to include only events that were modified and take place within next 24 hours, or they do not have EPIC flag.

Testing needs to be completed to have lead time 5 or 10 minutes and event to be scheduled 24 hours + lead time into the future. Include +/- 1 minute for overload to grab all events without the EPIC FLAG
